INTRODUCTION TO JAVASCRIPT

LETS BRING LIFE TO THE HTML

IN THIS LECTURE

- What is Javascript?

- What is Javascript used for?

- How Javascript is linked?

- What is a keyword?

WHAT IS JAVASCRIPT?

- A scripting language

- Used mostly on web platforms

- Make real time changes to your web page

- No need to reload the page

WHAT IS JAVASCRIPT USED FOR?

- Create and handle events on web page

- Events can be anything ranging from mouse movements to clicks to keypad movements to timers

- All real time changes without reloading the web page

- Making the web page interactive and giving the user real feel

HOW JAVASCRIPT IS LINKED?

- Linked directly to html tags using attributes

- Linked using html tag id

- Linked in-page

- Linked externally

WHAT IS A KEYWORD?

- Reserved words inside a programming language

- These words are not supposed to be redefined

- For example, words like
    - Var, function, int, string, Math, decimal, array

- In a nutshell, a function or variable or any other datatype cannot be defined using keyword

WHAT IF I HAVE QUESTIONS

- You can send me your questions @ dev-questions@farjadhabib.com

- I check emails frequently

- I will try to respond within 24 hours

- Github Repository, https://github.com/farjadhabib/YoutubeCodingLectures

NEXT LECTURE

- Javascript concepts and examples
